Success Criteria for "SAAS: the new frontier of learning" Project

The SAAS project will be considered a success if . . .

A fully functional test system is delivered on or before 25/05/2019.

The system shall be delivered in a state that is ready to be used in its intended production environment for its intended purpose. The users must be able to use a platform where they can increase their English language skills and learn from our lessons in a simple and intuitive manner.

Concerns raised during the test period are addressed according to the problem resolution plan contained in the Software Project Management Plan

All critical defects found before May 25th will be fixed. A critical defect is one for which there is no convenient workaround. Changes that take longer will be considered immediately. Minor errors will be changed later with the help of supervisors.

ITI Guglielmo Marconi's students can easily log into the system.
This specifically means that students of the school will be able to login into the system, choose their english course and start learning with this.

SAAS supervisors can edit courses.
All system administrators and supervisors are able to edit, delete and publish new courses, exercises, surveys and much more. Of course administrators can also manage system users.

The production database is updated.
The system database is managed automatically by the "MoodleCloud" platform.

Developers and supervisors have documented the schedule information
The data on the report should accurately reflect what was actually done during the development period.
30/03/2019 - Starting of the project.
04/04/2019 - Project Charter Approved.
10/04/2019 - Development of the course structure.
15/04/2019 - Implementation of the lessons.
21/04/2019 - Implementation of the mini-quizzes.
28/04/2019 - Writing of User Guide and System Administration Manual.
25/05/2019 - Product released.

Raw data on users activities and information is available for download
Administrators and supervisor can download in xml format registered user's information.

The System is properly documented.
First, a user manual shall be produced and included with the system. This user manual shall be easy to understand for non-technical users familiar with basic Internet concepts. This manual shall explain only how to use all features of the system.
Second, a system manual shall be produced. This system manual shall consist of the architecture

document, as well as any additional material required to provide a technician with all necessary information needed to maintain and update the system.

SAAS Acceptance Test User Survey

1.   Is the system working adequately such that you can begin using it in its production environment for its intended purpose?

    No   Yes   Yes, with some reservations

    _____

    _____

    _____

2.   Do you feel that you have been given the training and documentation you need in order to begin using the system?

    No   Yes   Yes, with some reservations

    _____

    _____

    _____

3.   Are there any other desired system features, beyond what is available today? If so, state the feature and indicate its priority.

    Feature: _____   Priority: High / Medium / Low

    Description:_____
